

The Georgia Botanical Society makes this digital document freely distributable. It represents history of the society and botany of the State of Georgia. This document is outdated. Many plant names and placement within taxonomy have changed. Not all locations marked for many species have specimens vouchered, some were by visual observation only, and for others some were assumed. As such, information should not be considered an absolute. It is hoped this document helps inspire others to continue botanical pursuits.

There is potentially useful and valuable information in this Atlas, just as there is a significant amount of misinformation. Caution is advised to those who use it to take those flaws into careful consideration before they take anything in it as being absolutely factual without additional verification. The document is best used to show the likely overall GA range for certain species, or in the case of something that seems to be where it has not been found before, the possibility that it might be there (knowing that it would need verification and may very well have never been present). Use with extreme caution and thoughtful consideration.

# ATLAS OF THE VASCULAR FLORA OF GEORGIA

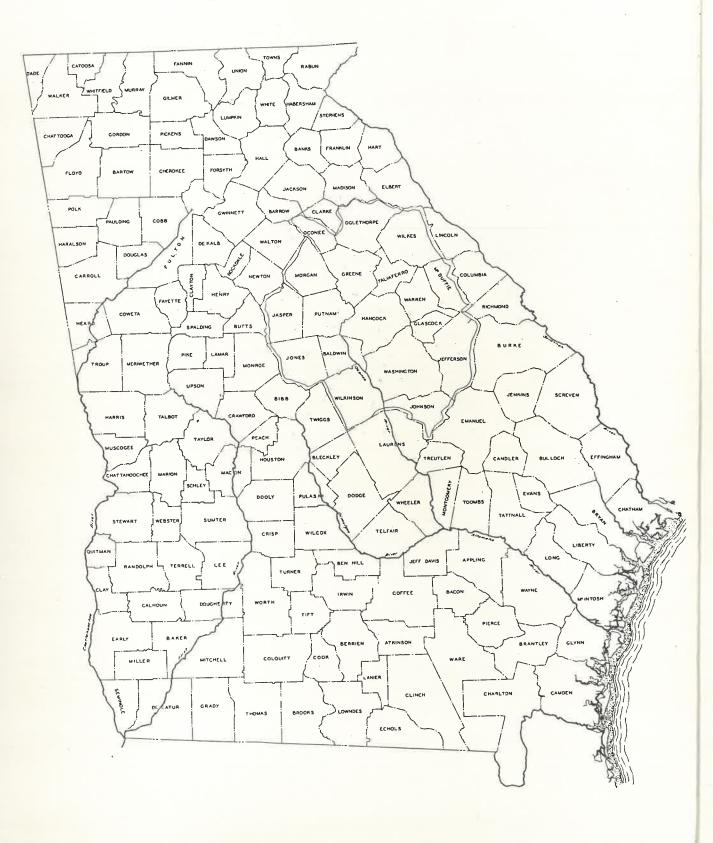

# GEORGIA BOTANICAL SOCIETY

## **REFERENCE MAP OF GEORGIA COUNTIES**

Due to necessary size reduction of maps indicating counties where each species of flora is present, it may be helpful to refer back to this larger map to identify a particular county. Symbols used to indicate presence of each species are:

- $\star$  Indicates species is found throughout the state.
- Indicates county in which species is present.

A Tribute to Marie Buchmann Mellinger

Marie's great love for all living things has given her life a sense of direction. As a naturalist and as a teacher, she has been totally unselfish in the sharing of her knowledge, strength, and energy with all ages, from the very young to the old.

This volume is the result of Marie's lifetime of learning and willingness to share. She has the remarkable ability to see the wholeness of nature. Her talent to inspire in others an appreciation of the natural world is a gift to all who know her.

It is Marie's hope that these records be used as a beginning documentation of flora in Georgia and as a guideline for changes to come. Of Marie it can be said, "together we walk."
