Dr. Bob's picture album at Discover Life.org <http://www.discoverlife.org/>

Use of DL site:

When you get to the site:

- 1) click on albums;
- 2) click on the H's and scroll down to my name (Bobby Hattaway);
- 3) and then counter-intuitively - click on edit (not my name) even though you cannot edit;
- 4) then click on "List all";
- 5) then either scroll down to the plant (or organism) you want and lastly
- 6) (and also counter intuitively) click on the number not the scientific name. That is it.

Step 5 Alternative to scrolling down a long list: (depending on your internet browser - say Internet Explorer) go to Edit on the top menu and then Find and then type in the name of the organism you want (this is sometimes faster than scrolling down)

If you have trouble dealing with the scientific names – go to Google with your common name and try to find the scientific one.
